

Graycell

**Manufacturer of Oil and
Dry Type Transformers**

Step Towards a Green & Sustainable World

About Us

Graycell Power Solutions Pvt. Ltd. manufactures high-quality distribution transformers and is founded by promoters with over 25 years of experience in the power industry.

Our transformers are designed to meet international quality standards and compete with leading manufacturers in the Indian power sector.

We operate a state-of-the-art manufacturing facility equipped with modern machinery, advanced testing systems, and strict quality control processes.

A skilled team of engineers and technicians ensures precision at every stage, from design and manufacturing to testing and delivery.

We aim to manufacture reliable power solutions built with precision, efficiency and sustainability.

Our Product Range

We offer a wide range of distribution transformers designed for reliability, efficiency and long service life.

- Oil-Filled Distribution Transformers up to 2500 kVA, 33 kV Class
- Aluminium Foil Wound Transformers
- Copper Foil Wound Transformers
- Dry Type Distribution Transformers
- Ester Oil Transformers
- Hermetically Sealed and Corrugated Tank Transformers
- Smart Monitoring Transformers with Digital Diagnostics

Applications include industrial, commercial, renewable energy and utility power distribution.

Our Strengths

At Graycell, our strength lies in engineering excellence and modern manufacturing practices.

Key advantages

- Optimized transformer design for efficiency and performance
- High quality raw materials and certified components
- Fully automatic LV foil winding machines
- Advanced monitoring of temperature, pressure and performance

These processes ensure consistent quality, durability and long service life.

Cutting-edge Manufacturing Technology

1. High Quality & Aesthetically Appealing Hermetically Sealed Corrugated Tank
2. Foil Winding Technology for Aluminium & Copper Winding

Advantages of Foil Winding Technology

- Uniform current distribution throughout the winding
- High mechanical strength against short-circuit forces
- Reduced hot spots and improved thermal performance
- Precision manufacturing through automated winding process
- Improved reliability and longer transformer life
- Eliminates human error

Aluminium Foil Wound Transformers

Aluminium foil-wound transformers are becoming increasingly preferred in distribution applications. Since aluminium is readily available in India, its use reduces dependence on imported copper and minimizes foreign exchange outflow.

Advantages of Aluminium Foil Wound Transformers

Compared to copper-wound transformers:

- 15–20% lower cost
- Equivalent energy efficiency and losses
- Similar overall transformer dimensions

Green Energy – Ester Oil Transformers

To support environmental sustainability, we recommend Ester Oil transformers.

Advantages of Ester Oil

- High fire point: 300–360°C
(compared to 160–180°C for mineral oil)
- Environmentally friendly and biodegradable
- Non-toxic and safe in case of leaks
- Lower environmental impact
- Higher moisture tolerance without dielectric strength loss
- Keeps paper insulation drier
- 2–3 times longer insulation life compared to mineral oil
